

**Contributions:** Every team member worked hard to integrate the database. Eric integrated the database to the big calendar (our list of event objects) which is a huge part of our database integration. Kyle and Elliot setup the server and client folders, and provided the database framework. Zach, Cole, Kyle, and Mayank worked hard to fix our broken code. Elliot also helped with most of this write up.

**HTTP Routes:** We replaced calls from and pushes to our mock database on the profile and assignments page with a real Mongo server. Our database is not that complex.
